

Lightning Ready

Description of service

As you may be aware, the Salesforce Classic interface is now reaching 'End of Life' and only new Salesforce features will be available in Salesforce Lightning.

Lightning Ready is a service which helps organisations understand and progress from their current Salesforce Classic environment to a new Salesforce Lightning enabled environment. Using this new Lightning Ready environment, customers can then understand what their Salesforce environment / solution will look like, what works (and doesn't), thus enabling and understanding the effort and costs of upgrading their Visualforce and customised pages to Salesforce Lightning.

This benefits of using this service are:

- A separate Lightning-enabled UAT/Sandbox environment to experience the Salesforce Lightning experience without impacting on your Production solution/ environment
- View and experience your five Visualforce pages enabled in the Lightning interface
- A set of your organisations data in an Lightning enabled environment (10 records across 10 objects that equals to 100 records)
- Supports and empowers business leaders to understand the changes and how they affect your business, with estimates of the effort (incl. costs) and time to migrate to a Salesforce Lightning environment to support the business decision-making
- Set and capped budget to control your initial investment

Costs: \$ 5,500 (excl. GST) Lite

Timeframe: 7 days (40 hours)

What do I get?

- A separate and dedicated Lightning enable UAT/Sandbox environment to experience your Salesforce solution/environment in Lightning.
- Five sample migration of your Visualforce pages to Lightning.
- The copy and migration of your organisations sample data to the Lightning enable environment (10 records across 10 objects that equals to 100 records).
- Understanding the Salesforce Lightning Readiness Report and the 'Gap Analysis'.
- A capped budget

Exclusions and Limitations

- *Full functional page with Lightning User interface.*
- *Dependent pages are not include with sample pages.*
- *JavaScript implementation*
- *Only UI will be upgraded.*
- *JavaScript buttons and events may not work.*
- *No changes will made in the controller*
