

# OcuCloud

## ‘Your internal and external security for your Salesforce.’

### Why?

OcuCloud is the Next Generation in Cloud Security offerings. With any application, there is a heavy reliance on trusting internal and external users that have access to your systems and your data. This risk is more significant when your staff have 24-hour access via Cloud applications. To ensure that your organisation has a full understanding of these threats, we partner with OcuCloud to monitor your external and internal threats.

### How

OcuCloud takes a digital recording of all the Salesforce activity for anyone from the moment they log into the system. This identifies/stops any malicious and negligent actions from employees and keeps valuable information in the cloud safe. OcuCloud is intuitive and easy to use, and exceptional at preventing breaches.

Product highlights are:

- Want to understand who is using the data and how your valuable business data is being used within the Salesforce ecosystem.
- Have employees with access to the data from workstations, laptops, tablets and phones whether they are in the office, on the road or working from home.
- Minimise your risks when the cloud service provider takes no responsibility for the security of your data.
- Understand the risks and costs if you or your organisation has a data breach?

### What do I get?

- An assessment of your current state of your Salesforce data security and risks.
- A demonstration and free trial of OcuCloud.
- Guidance on how to implement, training on how to use the solution and what to report on.
- A report document or presentation to facilitate or support your decision-making process
